

## Video Visitation

Staying connected – safely  
and efficiently

Managing in-person visitation can be one of the most labor-intensive tasks in a correctional facility. But with GTL's Video Visitation, inmates can see their friends and family directly, without the crowded lobbies and waiting times, streamlining the process for them and for your team.

As a supplement to, or replacement for, traditional in-person visits, video visitation is a highly scalable, convenient solution that benefits everyone involved.

GTL's Video Visitation solution is the most robust offering in the corrections industry today. Video visits, both on-site and remote, efficiently and safely increase the number of allowable visits while reducing officer involvement, inmate movement, and expense. Aiding in the effort to reduce recidivism, video visitation offers family and friends an additional and convenient option for maintaining contact with their loved ones.

GTL manages over  
**13 million visits**  
**each year** with  
its video visitation  
and scheduling  
technology.

## Benefits for Facilities

### Operational Efficiencies

Our automated solution allows for online visitor registration and scheduling, shifting responsibility from staff to visitors. With less staff needed to manage the visitation process, they can focus on other job duties instead.

### Reviewable Anytime, Anywhere

Our web-based application offers convenience and improves productivity by allowing staff to review video visitation sessions, set alarms, and control access from any web browser.

### Increased Security and Control

Inmates can visit without ever leaving their housing area, which saves time, decreases violent incidents, and closes off a key avenue for contraband.

### Decreased Facility Traffic

With on-site services, visitation can occur at a predetermined location within the immediate facility or at an established annex location, reducing the number of facility staff coming into contact with visitors.

In addition, remote video visitation considerably reduces visitors and foot traffic at the facility, increasing security and reducing the spread of communicable diseases.

GTL's video visitation solution comes with GTL Investigator, our suite of crime-solving tools that provides visibility into inmate relationships and connections.

## Benefits for Family and Friends

### Increased Connections

Video visitation is on-demand, allowing family and friends to video chat with their incarcerated loved one whenever they want, pursuant to facility visiting hours.

### Convenience, Savings, & Comfort

With video visitation, family and friends can realize immediate and personal communication without the hassle, expense, or inconvenience of traveling to a facility.

### Flexibility

Family and friends can have a video visit with their incarcerated loved one when they want from wherever they want in three ways:

**At the Facility** – Family and friends perform video visits on-site at facilities. This is comparable to traditional visits, except visits are performed at video visit stations instead of across a glass partition.

**From Home** – Family and friends can conduct video visits at home from their own personal computer. Since it's remote, family and friends who normally wouldn't be able to visit in person at the facility can participate as well.

**On the Go** – Family and friends can use their smart devices to conduct video visits conveniently and remotely from any location.

GTL works to transform correctional facilities into rehabilitative environments by providing technology that meets facility needs, keeps communities safe, improves the wellness of incarcerated individuals, and fuels successful reentry for returning citizens. Leading the correctional technology field, GTL provides communication, rehabilitation, investigative, intelligence, finance, and reentry solutions.
